

**In a world at war and threatened by natural disasters,
the last thing your family needs to worry about is the safety
and reliability of your electricity.**

**Thankfully, there is a stable, low-cost,
secure and bountiful source of power ready to be
delivered to your home.**

*Learn more about hydroelectricity and help us
power a brighter America.*

Hydroelectricity

Powering a Competitive Future for Franklin

ENVIRONMENTALLY FRIENDLY — generating no pollutants or harmful by-products, hydroelectricity poses no threat to our air, water, food or homes. It exists in abundant supply, enough to last centuries.

ECONOMICALLY FRIENDLY — hydroelectricity costs pennies on the dollar in comparison to oil, coal, natural gas, wind and solar. Unlike foreign oil, the price is predictable and stable and not controlled at the whim of a dictator.

SAFE FOR AMERICA — hydroelectricity poses no explosive danger and no radioactive risk. It is safe to transport, it will never leak and will never be the target of a terrorist threat.

Thankfully, the benefits of hydroelectricity will allow us to do just that;

- **\$4.2 million in new taxes for Franklin**
- **Major local tax cuts for Franklin taxpayers**
- **More than 300 local construction jobs in Franklin alone**
- **Millions in new business for local merchants**

The Northern Pass Transmission Project is the first step in getting this power onto the New England electricity grid and used by all of us.

And in addition to providing clean, stable and low-cost power, the Northern Pass Transmission Project will offer;

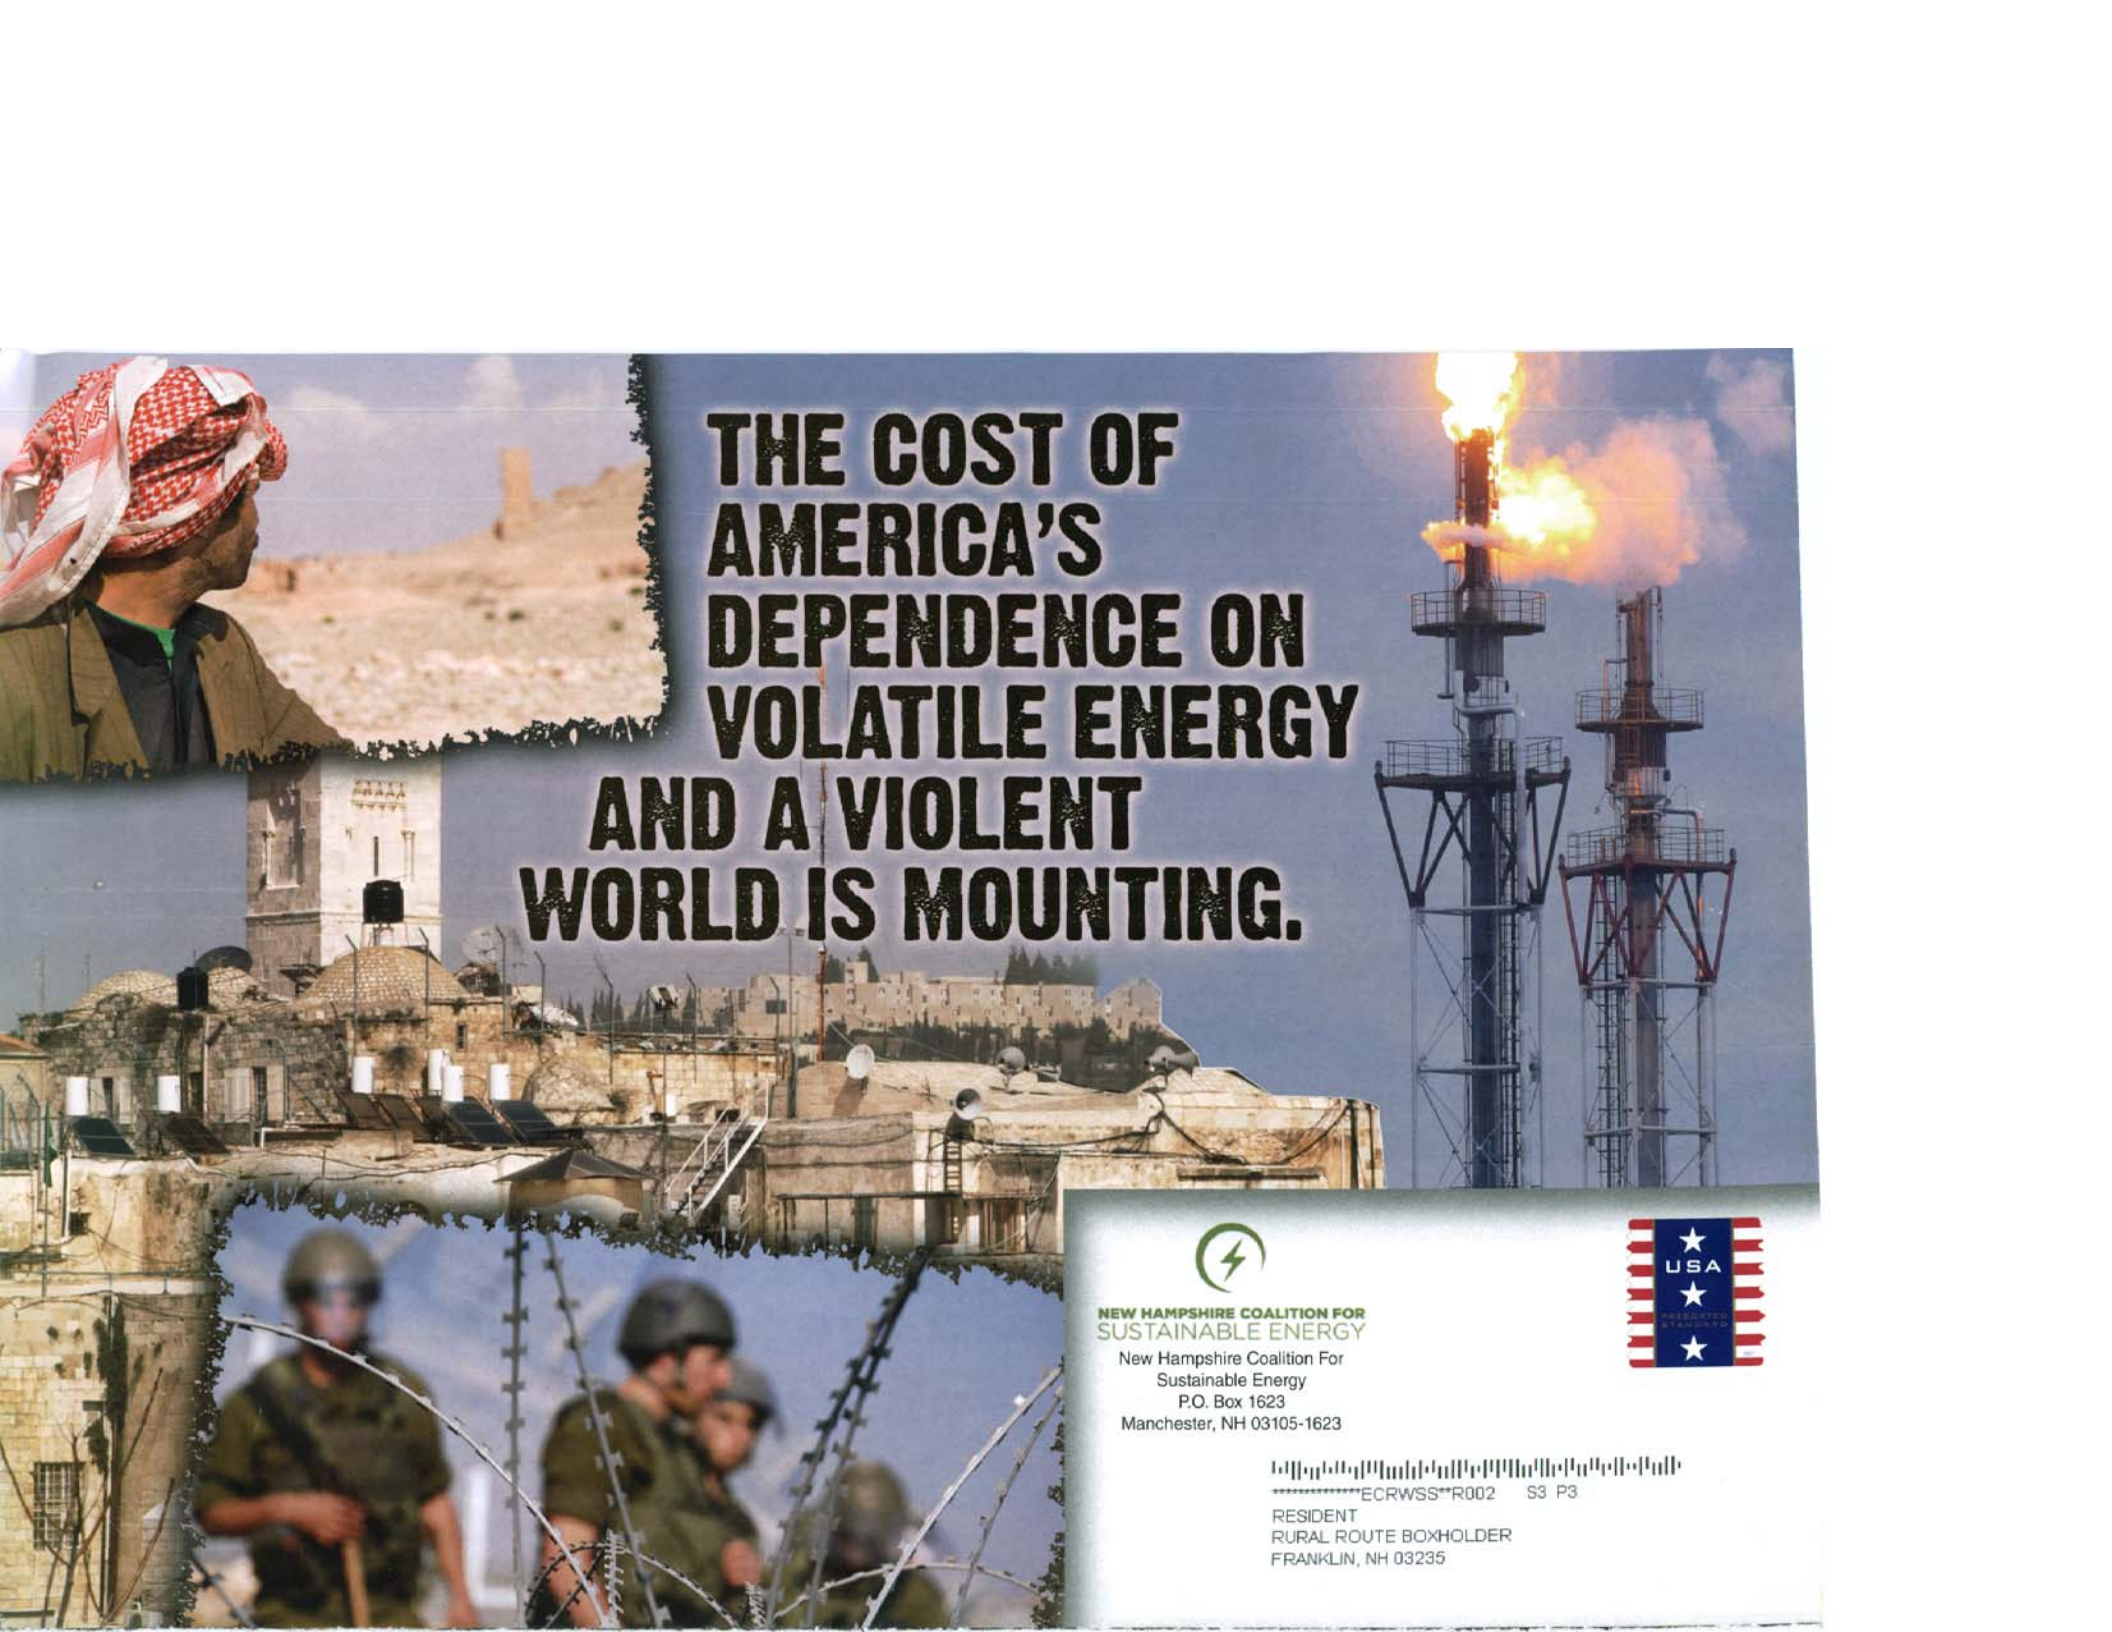

- **Low-cost energy for NH**
- **New Investments in Education**

We invite you to learn more at www.nhcse.org and encourage your local leaders to support the Northern Pass Transmission Project.

**The Northern Pass Transmission Project –
A Billion Dollar Investment in New Hampshire.**

Did you know that...
The Society for the Protection of NH Forests supported bringing Canadian hydroelectric power to NH as part of Governor Lynch's Climate Action Plan?
